**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claim 6 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. 2005/0080378.

‘378 discloses a method of forming a needle assembly comprising: providing a cannula having a sharp distal end and a proximal end; crimping the proximal end to seal the proximal end; inserting the cannula into a needle hub such that the proximal end of the cannula is disposed in a glue well of the needle hub; inserting glue into the glue well; and curing the glue ([0052]).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3726

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 8,10-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S.

2005/0080378.

Regarding Claim(s) 10, '378 teaches a method of forming a needle assembly comprising: providing a needle cannula having a distal end and a proximal end; inserting the needle cannula into a needle hub; extending the proximal end of the needle cannula beyond the needle hub; crimping the proximal end of the needle cannula such that it is sealed and formed into a mechanical interlock at the proximal end; displacing the cannula distally such that the mechanical interlock is disposed within a glue well in the needle hub; inserting glue into the glue well ([0052]).

'378 fails to teach the step of curing the glue with UV light.

But curing glue with UV light is well known in the art and it would have been obvious to one of ordinary skill in the art at the time of the invention was made to employ the step of curing the glue with UV light on the method of '378 so as to form a needle assembly effectively.

Regarding Claim(s) 8 and 11-21, all the steps are well known in the art and It would have been obvious to one of ordinary skill in the art at the time of the invention was made to employ the well known steps on the method of '378 so as to secure the removed needle safely.

### ***Response to Arguments***

5. Applicant's arguments with respect to claims 6-8,10-21 have been considered but are moot in view of the new ground(s) of rejection. See the new office action.
